

EHSAN ALLAHI

Full-Stack Software Engineer | React.js • Next.js • Node.js • PostgreSQL

Lahore, Pakistan • 0322-4542464 • ehsanallahi47@gmail.com • LinkedIn • GitHub

PROFESSIONAL SUMMARY

Full-Stack Software Engineer with 1+ year of professional experience building and maintaining production web applications with React.js, Next.js, Node.js, REST APIs and relational databases. Built and shipped Imtihan.app, a full-stack AI-powered EdTech platform, end to end: schema design, role-based access control, payment gateway integration and AI features. Comfortable owning features across frontend, backend and database, with a strong focus on debugging, clean architecture and reliable releases. Quick to pick up new frameworks and stacks.

TECHNICAL SKILLS

Frontend: React.js, Next.js (App Router), TypeScript, JavaScript (ES6+), HTML5, CSS3, Tailwind CSS, Shadcn UI, Zustand, TanStack Query

Backend & APIs: Node.js, Express.js, REST API design & integration, Prisma ORM, NextAuth v5, Strapi CMS, Casbin RBAC, JWT auth

Databases: PostgreSQL / Supabase, MongoDB, Firebase; schema design, indexing, query optimization

Cloud & Tools: Git, GitHub, AWS, Vercel, Cloudinary, Postman, Figma, VS Code

Quality & Process: Debugging, root-cause analysis, API & regression testing, code review, Agile/Scrum

AI-Assisted Dev: GitHub Copilot, ChatGPT, Google Gemini API, AI output validation

WORK EXPERIENCE

Software Engineer | ISH, Lahore

Oct 2025 – Present

- Build and maintain production React.js / Next.js applications, developing reusable components and improving performance.
- Design and integrate REST APIs between the frontend and Node.js backend services, ensuring reliable data flow across workflows.
- Debug issues across frontend, backend, API integrations and database layers; trace root causes and verify fixes.
- Validate features and edge cases before deployment to reduce regressions and production issues.
- Use GitHub Copilot and ChatGPT to speed up development and refactoring, reviewing all AI-assisted code before merge.
- Collaborate with designers and developers in an Agile team to deliver stable, on-time releases.

MERN Stack Developer (Intern) | TxLabz, Lahore

Jul 2025 – Oct 2025

- Built full-stack features across a React.js frontend and Node.js backend within an Agile team.
- Developed reusable React components and implemented pixel-accurate UI from Figma designs using Tailwind CSS.
- Participated in code reviews, Git workflows, sprint planning and debugging.

KEY PROJECTS

Imtihan.app — AI-Powered EdTech Platform

Next.js, Node.js, PostgreSQL, Prisma

- Architected a modular, scalable backend serving both web and mobile clients with clean separation of concerns.
- Designed a 10-role RBAC system with Casbin (students, teachers, guardians, editors, moderators, finance, admins, super admins).
- Designed and optimized PostgreSQL schemas with Prisma, including indexing and query tuning for fast reads.
- Integrated JazzCash and EasyPaisa payment gateways to power a freemium subscription model.
- Integrated Google Gemini to generate exam-ready MCQs from PDFs and deliver bilingual AI doubt-solving with streaming responses.

Slack Reminders App — Serverless Full Stack

React, Node.js, MongoDB

- Built a serverless app with a React admin dashboard and Node.js/MongoDB backend for scheduling automated Slack reminders.
- Designed MongoDB data models and REST endpoints; implemented rich-text to Slack Markdown conversion.

Full-Stack Job Portal

React, Node.js/Strapi, PostgreSQL

- Built a job platform with JWT authentication and role-based access for job seekers and recruiters.
- Developed REST APIs and recruiter dashboards that made applicant filtering faster and simpler.

EDUCATION

B.S. in Computer Science (BSCS) | Virtual University of Pakistan

2025

ACHIEVEMENTS

- **1st Position — Xavor AI Bootcamp:** recognized for building an AI-powered JavaScript project with practical, production-minded AI use.
